

World's First & Only PATENTED Nano Technology Stone Surface Protection Film
Designed for Marble & Stone Surfaces

Features:

- Patented Nano Technology
- Chemical Etch Proof
- Stain Proof
- Anti-Microbial
- UV Protection
- Gas Permeable
- Heat Resistant
- Liquid Impermeable
- Limited Lifetime Performance Guarantee

PATENTED Marble & Stone Surface Protection Film

StoneGuard® is a 5 mils thick, ultra clear polyethelene film that has an acrylic adhesive basin. On the surface of StoneGuard® is our ShieldX™ Nano coating that has high heat and chemical tolerance to protect the underlying stone. Lime, orange, and other acidic liquids typically stain and etch marble, lcestone, Vetrazzo, limestone, and other popular stone materials. StoneGuard® will provide significant protection from the likes of these food items and other harsh chemicals that may be used in the kitchen.

Unlike other immitation products claiming to be made for stone, StoneGuard® is the World's First & Only protective film to attain a full Patent for the Technology and use for Marble and Stone Surfaces.

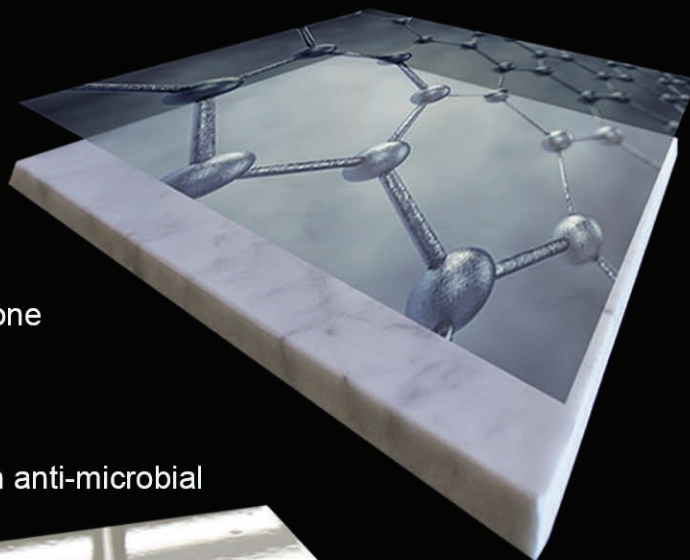

Features

UV Protection

StoneGuard® implements advanced UVA & UVB inhibitors to protect stone surfaces near windows. Rejecting 99% of UV rays will prevent oxidation, degradation, & discoloration of your stone countertops near windows.

Anti-Microbial

The ShieldX™ Nano Coating utilizes the latest in anti-microbial defense that minimizes bacterial growth.

FEATURES

Etch and Stain Proof

StoneGuard®'s ShieldX™ coating makes it virtually impossible to stain or etch from common household liquids. StoneGuard® is liquid impermeable which provides ultimate protection for the underlying stone. StoneGuard® is also Gas Permeable which allows the stone to breath and outgas naturally. Other imitation products can only make this claim, but in reality will seal the stone's pores, risking damage and oxidation.

Protected with StoneGuard® Clear

Non-Protected Surface

FEATURES

Heat Resistant

In lab testing, StoneGuard® have been tested to resist temperatures of up to 350° Fahrenheit. Although we do not recommend it, hot pots & pans can be placed onto StoneGuard® without heat damage to the film or stone.

FEATURES

GLOSS and SATIN FINISHES

StoneGuard® is available in two different finishes. Both options will help enhance the details and look of the stone.

StoneGuard® **Clear** is designed for Polished, Gloss surfaces.

StoneGuard® **Satin** is designed for Honed, Matte Surfaces

PROJECT SAMPLE

200+ Rooms, Westin Hotel with StoneGuard® Satin on all honed stone surfaces.
Installed by Premier Protective Films, an Authorized StoneGuard® dealer.

FREQUENTLY ASKED QUESTIONS

How is StoneGuard® different from sealers?

StoneGuard® is a Patented Nano Tech Stone Surface protection film (the World's First & Only Marble Protection Film granted a Patent for its technology & use for Marble and natural stone surfaces). Sealers are a form of liquid chemical that requires reapplication every 6 months. In reality, tests have proven sealers offer little protective capabilities from acidic chemicals such as wine, lime, or coffee. StoneGuard® on the other hand, is a 5 mils thick adhesive based film with an advanced nano-technology coating that protect the stone from scratches, dings, staining, etching, growth of bacteria, and burn marks from excessive heat. StoneGuard® will take the brunt of the wear and damages that can otherwise damage the Stone itself.

How do I maintain StoneGuard®?

Use warm water and an approved clean microfiber towel to wipe the surface. For more difficult to remove food items, use an approved StoneGuard® Cleaner or Surfactant.

What chemicals can StoneGuard® protect counter surfaces from?

White vinegar, coffee, citrus extract, bleach, red wine, and a host of chemicals and organic liquids (including lime and lemon) commonly found in the kitchen. The nano-particles of StoneGuard® immediately converge to create a non-porous surface that prevent these chemicals from etching onto the surface of the film.

***Note*-** StoneGuard® will prevent liquids from penetrating through the film. Since StoneGuard® is a rigid film, it will not wrap or bend over edges and onto side walls. If liquids spill over onto exposed and unprotected surfaces, these liquids can seep in through these surfaces and under the areas where StoneGuard® is applied. This is not part of the warranty and guarantee. It is recommended to wipe spills to prevent this from happening.

I understand that StoneGuard® will protect my countertop, but how will it hold up against chemicals listed above.

StoneGuard® utilizes our most advanced nano coatings technology, ShieldX™ Etchguard, making it nearly impossible for these chemicals to etch into the film itself. Please see Warranty Card for details of the capabilities and limitations of StoneGuard®.

Will the film get damaged over time?

StoneGuard® is considered a sacrificial layer that will see natural wear and tear over time. It is designed to be removable in the event the film is damaged and require replacement.

Note StoneGuard® Satin has a satin coating, which if scratched or abraded repeatedly enough over time, may begin to show the gloss underneath. This is an expected natural wear of the coating and is not covered under the scope of the Warranty or Guarantee.

Follow maintenance instructions on the Warranty Card to learn how to extend the life of StoneGuard®.

Is StoneGuard® Available for Honed or Polished Surfaces?

StoneGuard® is available for both Gloss and Honed Stone surfaces. StoneGuard® Clear is made for Gloss, Polished stoned. StoneGuard® Satin is made for Matte, Honed stone. Both will help enhance the look of the stone.

Is StoneGuard® the same as PPF (Paint Protection Film) or Other Products claiming to be Marble Protection Film?

StoneGuard® is not PPF or Re-Purposed Window Film. StoneGuard® is designed from the ground up & made specifically for Marble & Stone Surfaces. Other products such as PPF and Re-Purposed Window Film can damage Marble and Stone Surfaces. These other products were not designed with the specifications of Marble and Stone in mind.

Other products claiming to be Marble Protection Film are simply PPF or re-purposed window film. StoneGuard® is the ONLY protective film granted a prestigious US Patent for its original technology and use for Marble and Stone Surfaces.

Can I install StoneGuard® myself?

We care about the end-results, which is why StoneGuard® requires professional application. Please contact us at StoneGuard@StoneGuardUSA.com for the nearest Authorized Dealer near you.

What is StoneGuard®'s warranty?

StoneGuard® comes with a Limited Lifetime Warranty and Performance Guarantee. The Warranty does not cover normal wear and tear. For the full Scope of the Warranty and Guarantee, please refer to the information stated on the Warranty Card.
